

THE HYBRID ONE.

- ✓ PMG Alternator
- ✓ HS315 Controller
- ✓ Battery Charger
- ✓ Governor (Actuator)

All the kit you need.
All in one place. All in one box.

More and more applications require renewable energy sources. With Mecc Alte's Hybrid ONE power component kit, it's possible to create compact cost effective power solutions to generate power for both immediate use and storage.

The Hybrid ONE component kit delivers lower running costs than traditional AC alternator systems while ensuring consistent power availability on site. Its intelligent power management features achieve lower operational costs through how the components adapt to any demand fluctuations supplied by the engine, battery, or even both.

With PMG (Permanent Magnet Generator) alternator ranges from 3kW to 25kW and power options upto 5MW, the HS315 Hybrid Controller designed specifically to control the engine speed and charge your system's battery, as well as a battery charger and governor, the Hybrid ONE power component kit has everything you need to reduce both running costs and emissions of your onsite power equipment.

Our alternators and controllers are also Mecc Alte Smartech enabled. With the ability to communicate directly through CANbus or remotely through WiFi connection, you can monitor and troubleshoot power situations even when you are away from site.
