

THE MOBILE ONE.

- ✓ NPE Alternator
- ✓ GC250 Controller
- ✓ Battery Charger

All the kit you need.
All in one place. All in one box.

It's time to go mobile. Power-up from anywhere, even when short on space. Designed around Mecc Alte's NPE alternator range, the Mobile ONE power component kit maximises power output in space-restricted environments - from welfare cabins to mobile construction equipment.

With The Mobile ONE, source the compatible power components for your chosen engine and battery all from one place, knowing that they will integrate seamlessly with your project or application.

Communicating with the small yet mighty NPE alternator, Mecc Alte's advanced GC800 Controller is engineered to perform reliably in demanding environments. Its intuitive touch screen interface, operable even with gloves, ensures precise control in all conditions. So you can have reliable power generation, even when you cannot rely on the weather.

The Mobile ONE component kit is completed with a battery charger and governor.

Our alternators and controllers are also Mecc Alte Smartech enabled. With the ability to communicate directly through CANbus or remotely through WiFi connection, you can monitor and troubleshoot power situations even when you are away from site.
